MaxPro 800

MaxPro 800 in line water filter has been specifically created to **reduce fluoride**. This additive is now being added to many water supplies because of an E.P.A. mandate, but it is also a concern of many people who do not want to ingest fluoride. The filter media (activated aluminum oxide) comes to us from Selecto Scientific and is an E.P.A. approved method of removing fluoride from drinking water. Note that the MaxPro 800 does not remove any off tastes and odors, nor provide any particulate filtration. To address those concerns in drinking water another filter will need to be added to your recommendation. The MaxPro 800 is packaged the same as the MaxPro 400. Product is warranted to be free from any defects in workmanship or materials for one year. **Length of filter is 12" and diameter is 3"**.

PRODUCT DETAILS**

MaxPro 1000

The MaxPro 1000 De-Ion-Ice-R™ is an inline water filter that produces "clearer" ice cubes for refrigerators with intenal ice makers. This new filter reduces dissolved minerals in the water that supplies the ice maker. While not specifically designed for "water-through-the-door" refrigerators, it can be installed on one with some minor modifications. The reason we say "clearer" rather than clear is that traditional refrigerator ice makers still trap air in the center of the ice cubes. Any lack of clarity when using the MaxPro De-Ion-Ice-R™ is because of this trapped air, and a trivial amount of minerals.

How long the MaxPro 1000 De-Ion-Ice-R™ will last before needing to be replaced is a function of ice usage and amount of dissolved minerals in the customer location. A great signal as to when a cartridge change is necessary is when cloudiness returns to the cubes. **Length of filter is 10" and diameter is 2.5". Mounting clip is included.**

With fittings (in retail package) \$ 118
With fittings (bulk box of 25) 25-pk ea. \$ 110

MAXIMUM recommended line pressure for this product is 75 PSI. Pressure above 75 PSI indicates the absence of a properly functioning water pressure regulator at the property. Excessive water pressure poses a risk of property damage to you. Problems due to excessive water pressure are NOT covered by this product's warranty. **BEFORE** installation of any Water, Inc. product, **confirm that water supply pressure does not exceed 75 PSI.** Questions? Contact Water, Inc. Service Depart. at 800.322.WATER(9283)

Installations must comply with appropriate plumbing codes. Do not use vinyl tubing to connect any Water, Inc. Product to a water source. Polyethylene tubing is recommended for cold water applications.
